

Dear Customers,

SolarWorld has always set standards in the industry where others have stood still, for example, with positive performance sorting or the linear performance guarantee. In 2017, we will take the decisive additional step and offer you a **product warranty extended to 20 years** and **new module performance classes in 10 Wp steps**. Regarding our modules, in 2017, we are focusing fully on the **innovative mono-PERC technology** and our bifacial Sunmodule Bisun. This allows us to achieve a **continuous module performance improvement** for you **while maintaining the highest quality**. This means real added value for your business success.

Join us in looking forward to a successful 2017.

Sincerely,

Your SolarWorld Team

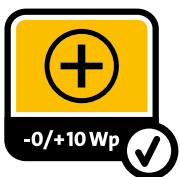

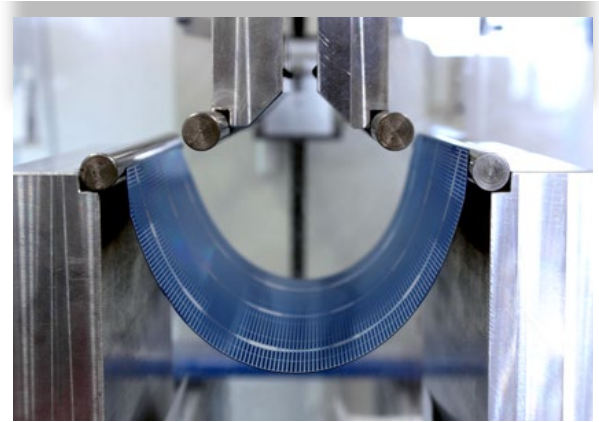

>> 20 YEARS PRODUCT WARRANTY

Our products must deliver what they promise – over their entire service life. Quality standards ‘Made by SolarWorld’ are based on the real-world conditions our modules will be exposed to. SolarWorld thus takes the decisive extra step in testing and assuring module quality – in a way that far exceeds industry standards.

We have **doubled the product warranty for our modules from 10 to 20 years*** thus offering our customers **even better investment security for the system** – because we are convinced: **REAL VALUE lasts longer!**

* valid for all modules installed from January 1, 2017

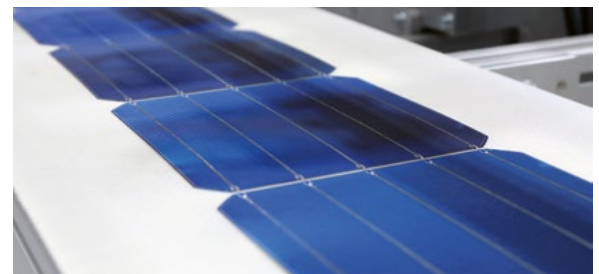

>> 10 Wp PERFORMANCE CLASSES

With innovative PERC cell technology, we continuously deliver higher performance at the same module size with the same highest quality standards for the materials used. For our customers, **in the future, we are delivering all modules with mono-PERC cell technology in 10 Wp performance classes**. With this, our customers are receiving on average **more power per nominal power class; distributors and installers benefit from the reduced number of articles and higher availability**.

NEW QUALITY SEAL

Top quality ‘Made by SolarWorld’ – independently verified: The certificate “VDE Quality Tested” from the German Association for Electrical, Electronic + Information Technologies – VDE certifies SolarWorld modules as having **high reliability, low degradation and optimized functional reliability**. For our customers, this means even more security for their investment.

SolarWorld Quality: Customers who choose SolarWorld receive top quality products from a manufacturer that implements a standardized quality system at all of its sites.
